investment property in the future Know the risks of interest-only home loans	(e.g. parental leave, change in circumst	tances)		
 Interest-only home loans seem more affordable because initially the repayments are lower than the repayments on principal and interest loans but they have some drawbacks: Interest-only loans cost more - The amount of money you owe does not reduce during the interest-only period, which means you'll pay a lot more interest over the life of the loan, compared to a principal and interest loan. For example, a \$500,000 loan over 25 years, with an interest rate of 5%, would cost you an extra \$40,062 in interest if it was interest-only for the first 5 years. Repayments will increase at the end of the interest-only period - When the interest-only period ends you'll need to start repaying the principal as well as the interest - and, with less time to pay it off, your repayments are likely to be a lot higher. Not building equity - If your property does not increase in value during the interest-only period, you risk having no equity in your home at the end of this period, despite making payments every month. This may put you at greater risk if there is a downturn in the market or you circumstances change and you have to sell.

(a) you make an additional payment; or (b) you pay out that fixed rate loan or an amount becomes due and payable; or (c) if you change your loan type or fixed interest period that applies to your loan. For example, if you request to switch from a 5 year fixed rate loan to a 2 year fixed rate loan or to a variable rate loan.

Break costs could be substantial if interest rates fall during the fixed interest period. You should take break costs into consideration when deciding whether you want to fix your interest rate. The terms and conditions applying to your loan will set out when break costs may be payable. You should read the terms and conditions carefully and ensure that you understand them.
